CUT SHEET · Veylan Arcworks
Arcway-208 Distribution Switchboard

Manufacturer: Veylan Arcworks (fictional demonstration manufacturer)

Product family: Arcway-208 Distribution Switchboard

Application: indoor service distribution for a fictional training project.

This cut sheet is invented for SpecGuard and does not describe a real product.

ELECTRICAL DATA

Nominal system: 208V, 3-phase, 4-wire.

Bus arrangement: copper main bus with full neutral and ground bars.

Enclosure: indoor, floor-mounted steel assembly with front service access.

Main protective device: molded-case main breaker sized by the final design load.

Branch positions: configurable to suit the listed feeder breaker schedule.

Short-circuit rating: selected during engineered configuration for the application.

Product drawings: issued after the fictional order review is complete.

Arcway-208 Distribution Switchboard · Connection and Documentation Data

FIELD CONNECTION DATA

Field conductor terminations: 90 deg C minimum.

Accepted conductor material: copper conductors within the marked lug range.

Installation access: front removable barriers support routine field landing work.

Torque information: ship a terminal schedule with the configured assembly.

NAMEPLATES AND RECORDS

Provide equipment identification and breaker labels with the final shipment.

Provide a wiring diagram that identifies all main and feeder field connections.

Provide factory routine test documentation for the completed assembly.

DEMONSTRATION NOTICE

All names, values, and statements on this cut sheet are fictional demo content.

No endorsement, certification, or product availability is implied by this fixture.
